Pain Relief for WiFi Headaches

Chanalyzer brings simplicity and power to wireless troubleshooting. It combines WiSpy’s ability to read raw RF data with your computer’s built-in WiFi card to show you how environmental WiFi saturation and non-WiFi transmitters affect your network. Chanalyzer is capable of displaying activity in the 2.4 GHz band, 5 GHz band, or both simultaneously if using WiSpy DBx or a Cisco access Point.

With Chanalyzer you can:

• Find the clearest channel for your network to optimize WLAN connectivity and throughput
• Locate and defeat interfering transmitters harming your network
• Identify and document RF issues and your solutions, with customized, colorful reports (Report Builder accessory)
• Troubleshoot remotely with data from Cisco access points (Cisco CleanAir accessory)

Understand Utilization by Color

A variety of devices transmit in the same part of the wireless spectrum as WiFi, including microwave ovens, baby monitors, cordless phones, security cameras, and more. Chanalyzer visualizes the activity of these transmitters and displays it by color, ranging from blue for infrequent transmissions to red for constant, channel-destroying activity.

DVR-Like Playback Controls

Similar to a television’s DVR, you can pause or rewind your data while Chanalyzer continues to record in the background. When reviewing a recording, Chanalyzer’s Waterfall Navigation allows you to evaluate utilization over time to identify peak hours and adjust your network accordingly. Every graph and table in Chanalyzer adjusts itself to display only information from the selected time span in the Waterfall Navigation Pane.

What you get in Chanalyzer:

• Visualization of raw spectrum data
• WiFi network overlays
• Visual playback with Waterfall Navigation
• Find offending devices
• Session recording and saving
• Automatic device classification
• Option to add specialized accessories
• Add notes by location
Complete your toolkit with these optional accessories

**Report Builder** (accessory)
Report Builder is a fast, simple way to explain and document RF interference and congestion issues. With just one click, you can add a snapshot, edit image size, create descriptions or use preloaded explanations.

- Document spectrum events to explain to your audience, even if they’re not tech-savvy
- Build comparisons to highlight impact from interference
- Export directly to PDF, HTML, RTF, or copy to clipboard

**Cisco CleanAir®** (accessory)
Cisco CleanAir allows you to remotely visualize both 2.4 and 5 GHz wireless environments simultaneously from your WSSI Modules or access points in Local, Monitor, or SE-Connect modes.

- Troubleshoot from your desk
- Monitor your Air Quality Index and see identified interferers that impact your network.
- Visualize both the 2.4 and 5 GHz bands simultaneously from your CleanAir AP

**Device Finder** (accessory)
Defend your WLAN airspace with Device Finder, a purpose-built directional antenna for Wi-Spy that quickly tracks down transmitting devices in the 2.4 GHz spectrum.

- Bring laser-like focus to your search for offending signals
- Visualize the device’s location as you approach the signal
- Positively identify and mitigate hidden interference

---

**MetaCare Assurance Plan**
The MetaCare Assurance Plan includes future software updates for MetaGeek software during the period the plan is in effect. Updates range from bug fixes and minor feature updates to major enhancements and all the other wonderful changes we have in store.

For more information about MetaCare Assurance Plan, visit [www.metageek.com/metacare](http://www.metageek.com/metacare)

**Technical Requirements**
**OPERATING SYSTEM:** Microsoft® Windows Vista, 7, 8, and 10
**Mac OS X VIRTUALIZATION:** VMware Fusion, Parallels
**MINIMUM REQUIREMENTS:** 1024 x 600, 4 GB RAM, .NET 3.5, 1 USB port
**WI-FI RADIO:** 802.11n/ac recommended
**NOTE:** Virtual machines require a USB WiFi adapter to view WiFi information

**Cisco CleanAir Mode** (remote troubleshooting)
REQUIRED HARDWARE: Cisco CleanAir-Enabled Access Point (Aironet 1552, 2600, 3500, 3600, and 370)

**MetaGeek Wi-Spy Mode**
REQUIRED HARDWARE: Wi-Spy, Built-In WiFi card (802.11ac recommended, a/b/g/n compatible), Wi-Spy (DBx, 2.4x)
**OPTIONAL HARDWARE:** Device Finder 2.4 GHz Direction
